Meeting Minutes

Subject:	Meeting with Krishna Ragil from Haemograph
Group name/ identifier	Group 24
Meeting Location, Date & Time	Online on Microsoft Teams Date – 24 August 2026, Time – 2:00 pm to 3:00 pm
Group members present	Jianhao Zhang, Ria Mishra, Rohan Roy Mathew, Xingcan Wang, Xuan Zhang
Apologies	

1 Actions from previous meetings

Task	**Who is responsible**	**Deadline**
Compare preprocessing methods for rheological data	Team	Completed
Evaluate feature combinations for classification	Team	Completed
Investigate wavelet-based analysis approaches	Team	Ongoing

2 Items discussed and decisions made

Item	**Decision (if applicable)**
Preprocessing methods	Raw data and three smoothing methods were compared. Smoother curves are not necessarily better, as fluctuations in the raw data may contain useful information rather than only noise.
Preprocessing method selection	Peak error, loop-area change, and low-frequency residual were compared. SG showed the best overall balance and was selected for further analysis.
Feature selection	Three-feature combinations showed good classification performance. Hypothesis testing should also be included to demonstrate the statistical significance of the selected features.
Wavelet analysis	Further analysis will focus on wavelet coefficients and energy distributions across different frequency bands and experimental protocols.
Physics model comparison	Relevant physical or rheological quantities will be identified to provide meaningful comparisons between the wavelet analysis and physics model.
Model and dataset	The model inputs, parameters, preprocessing steps, and dataset from the selected paper were reviewed.

3 Agreed actions from this meeting

Task	**Who is responsible**	**Deadline**
Present statistical significance results for selected features	Team	Before next meeting
Continue wavelet analysis and investigate energy distribution	Team	Before next meeting
Compare wavelet results across different experimental protocols	Team	Ongoing
