Meeting Minutes

Subject:	Meeting with Krishna Ragil from Haemograph
Group name/ identifier	Group 24
Meeting Location, Date & Time	Online on Microsoft Teams Date – 3 September 2026, Time – 12:00 pm to 1:00 pm
Group members present	Jianhao Zhang, Ria Mishra, Rohan Roy Mathew, Xingcan Wang, Xuan Zhang
Apologies	

1 Actions from previous meetings

Task	**Who is responsible**	**Deadline**
Continue analysis of collected rheological datasets	Team	Ongoing
Investigate wavelet-based analysis approaches	Team	Ongoing
Review relevant gelation-point identification methods	Team	Ongoing

2 Items discussed and decisions made

Item	**Decision (if applicable)**
Change-point detection	A change-point detection approach was proposed to identify structural transitions using G′, G″, tanδ and complex viscosity rather than relying only on the conventional G′–G″ crossover.
Data preprocessing	The proposed workflow includes standardisation, removal of invalid values, light smoothing, normalisation and calculation of gradients and other derived features.
PELT algorithm	PELT was proposed as a possible algorithm for detecting candidate change points in the rheological signals.
Change-point evaluation	Candidate points should be evaluated based on change magnitude, agreement across multiple features, persistence and physical plausibility.
Validation	Claims about labelled or ground-truth gel points should be supported by published literature. The value of the method depends on whether it provides meaningful information beyond the conventional G′–G″ crossover.
Winter–Chambon criterion	The Winter–Chambon criterion was discussed as a potential reference for validating the gel point where suitable multi-frequency data are available.

3 Agreed actions from this meeting

Task	**Who is responsible**	**Deadline**
Continue exploring and analysing the available datasets	Team	Before next meeting
Implement and test the proposed change-point detection approach	Team	Before next meeting
Compare detected change points with established rheological criteria	Team	Ongoing
