Meeting Minutes

Subject:	Meeting with Krishna Ragil from Haemograph
Group name/ identifier	Group 24
Meeting Location, Date & Time	Online on Microsoft Teams Date – 21 September 2026, Time – 2:00 pm to 3:00 pm
Group members present	Jianhao Zhang, Ria Mishra, Rohan Roy Mathew, Xingcan Wang, Xuan Zhang
Apologies	

1 Actions from previous meetings

Task	**Who is responsible**	**Deadline**
Continue analysis of collected rheological datasets	Team	Ongoing
Investigate wavelet-based and STFT signal-analysis approaches	Team	Ongoing
Review relevant gelation-point identification and validation methods	Team	Ongoing

2 Items discussed and decisions made

Item	**Decision (if applicable)**
Semi-synthetic signal analysis	STFT and wavelet methods were compared using semi-synthetic signals, with machine learning used to assess clotting-stage information.
Baseline comparison	Compare the current approach with a simpler time-based or change-point method to demonstrate its added value.
Validation	Test the selected methods across multiple signals and noise conditions, supported by statistical evidence.
Armstrong dataset	Prioritise the Armstrong dataset and associated paper when interpreting variables and signal features.
Synthetic data	Use synthetic or semi-synthetic data where specific features or noise conditions cannot be tested with available real data.
Project direction	Consolidate the current approaches, strengthen literature support and validation, and review results before selecting the final method(s).

3 Agreed actions from this meeting

Task	Who is responsible	Deadline
Review the Armstrong dataset together with its associated paper and clarify relevant variables and features	Team	Before next meeting
Establish a conventional time-based or change-point baseline for comparison with the current methods	Team	Before next meeting
Test selected approaches across multiple signals with different clotting timings and noise conditions and add statistical evaluation	Team	Ongoing
