Minutes of Meeting

Subject:	Meeting with Dr Ragil Krishna from Haemograph
Group name/ identifier	Group 24
Meeting Location, Date & Time	Online on Microsoft Teams Date – 14 October 2026, Time – 12 pm to 1 pm
Group members present	Jianhao Zhang, Ria Mishra, Rohan Roy Mathew, Xingcan Wang, Xuan Zhang
Apologies	

1 Items discussed and decisions made

Item	**Decision (if applicable)**
Presentation structure	Reviewed the mock presentation and identified the need for a clearer narrative linking research questions, methodologies, findings and conclusions. Recommended reducing the number of slides and focusing on key outcomes rather than displaying all technical results.
Research framework	Recommended including a workflow diagram illustrating data preprocessing, analytical methods, validation procedures and feature selection. The framework should demonstrate how each stage addresses the research objectives.
Research objectives	Highlighted inconsistencies between the stated research questions and the presented findings. Recommended maintaining consistent terminology and explicitly linking each result to its corresponding research objective.
Measured and synthetic data	Advised placing greater emphasis on actual experimental blood rheology data. Synthetic datasets should primarily support methodological validation rather than serve as the main evidence for conclusions.
Technical findings	Discussed the presentation of large-amplitude oscillatory shear (LAOS), step-up and step-down responses, and signal-processing results. Recommended highlighting meaningful findings and their implications rather than presenting extensive statistical tables.
Method validation	Emphasised the importance of evaluating analytical methods against the specifications established in Phase 1. The presentation should clearly explain which requirements were achieved and identify remaining limitations.

Presentation design and delivery	Recommended improving font consistency, figure readability and slide formatting. Presenters should avoid rushing and use concise explanations to communicate the significance of findings.
Conclusions and future work	Identified the need for stronger, evidence-based conclusions that address the original research questions. Dr Ragil offered to review revised slides before the final presentation. Further discussion of technical results and the final report was proposed following the presentation.

2 Agreed actions from this meeting

Task	**Responsible**	**Deadline**
Revise the presentation structure to establish a clearer connection between research objectives, methods, results and conclusions.	Team	Before final presentation
Develop a workflow diagram outlining data processing, analytical methods, validation and feature selection.	Team	Before final presentation
Refocus the presentation on experimental findings and use synthetic data primarily for validation.	Team	Before final presentation
Simplify technical slides, improve formatting consistency and highlight key findings using appropriate figures and concise explanations.	Team	Before final presentation
