Wavelet-Based Time-Frequency Analysis of Evolving fluids in a Microfluidic Rheometer

Subject:	Meeting with Supervisor
Group name/ identifier	Group 24
Meeting Location, Date & Time	Location: Not recorded Date: 24 September 2026 Time: Not recorded
Group members present	Rohan Mathew, Jianhao Zhang, Xuan Zhang, Ria Mishra, Xingcan Wang (Alex). Supervisor: Saumya.
Apologies	None

1 Actions from previous meetings

Task	**Who is responsible**	**Deadline**
Hold an internal meeting and allocate the five step pipeline tasks.	All members	Completed before this meeting
Prepare a report/presentation skeleton and begin the draft report.	All members	In progress

2 Items discussed and decisions made

Item	**Decision (if applicable)**
Shared pipeline and continuity	The team confirmed that the new workflow would combine existing data processing, rheology and signal analysis work. Saumya emphasized preserving earlier contributions and explaining why the approach evolved.
Task allocation	Jianhao: preprocessing and protocol classification. Xuan: conventional LAOS analysis. Rohan: step up/down rheology. Ria: Fourier and wavelet methods. Xingcan (Alex): validation and minimal feature selection. All members: report and presentation.
Client objective clarified	The immediate goal was to identify changes and deviations in fluid properties rather than force clot point detection. Conventional analysis would establish the baseline before signal feature comparison.
Progress and dependencies	Preprocessing files had been shared in Teams. Classification was expected to finish that day, with conventional analyses to follow. No new quantitative results were presented because work had only just been allocated.
Break and presentation review	No supervisor meeting was expected during the semester break; a client meeting was optional. From the week commencing 5 October, reserve approximately 15 minutes for presentation review.
Report narrative	Aim to complete the report draft over the weekend. Include prior approaches and results, explain their limitations and connect the methodological changes into a coherent account. Saumya would review shared material and provide feedback.

3 Agreed actions from this meeting

Task	**Who is responsible**	**Deadline**
Finish protocol classification and make the shared processed data available.	Jianhao	24 September target
Complete conventional LAOS analysis.	Xuan	24-25 September target
Complete step up/down rheological analysis.	Rohan	24-25 September target
Compare Fourier and wavelet features using the shared data and baselines.	Ria	After baseline analyses
Validate findings and select a minimal useful feature set.	Xingcan (Alex)	After method comparison
Integrate prior work and complete the draft report.	All members	Weekend following meeting
Review shared report/slides and provide feedback.	Saumya	Before/at next meeting

4 Next meeting

Location	Not recorded
Date & Time	After semester break, in the week commencing 5 October 2026; exact time not recorded
Goals	Review integrated results, report progress and the draft presentation.
